Setting the pace of progress in our industry

# Building CNG Infrastructure for a **CLEANER TOMORROW**

## The global shift from oil to natural gas is transforming the transportation industry.

Wayne Perry is proud to be part of the transition. We're helping to fast track the green energy revolution taking place across our nation's roadways. With over 50 years of experience delivering innovative EPC (engineering, procurement, construction) solutions to the nation's largest oil and gas companies, we're building cutting-edge infrastructure to create a more sustainable world.

Our industry-leading CNG construction projects range in scope from adding dispensing bays to traditional fueling stations, to single-site design and construction, to large-scale, multi-site buildouts. Drawing on our time-tested expertise and network of industry partners, we custom design, build, and commission state-of-the-art CNG fuel servicing stations quickly and cost-efficiently.

Our team of experts has a deep understanding of the diverse issues involved in CNG station construction—from site selection and feasibility analysis to permitting and licensing, to equipment procurement and system testing, on through commissioning. Over half a century of design/build experience combined with our agile project management processes enable us to sidestep the issues that can derail a project at any point in the project lifecycle. Count on us to design, build, test, and maintain your site with tight collaboration and timely communication every step of the way.

## Delivering the insight and expertise to build a cleaner tomorrow today

Renewable natural gas (RNG) is the lowest carbon-

## Specialists at accelerating project timelines

We've built our operations to serve the diverse needs of our customers with speed, professionalism, and cost efficiency with an emphasis on service, quality, and safety. Leveraging the combination of our know-how and strong relationships with our utility company partners, equipment manufacturers, and local building authorities, we efficiently manage your project's timeline, leaving nothing to chance. In fact, we regularly surpass the industry benchmark for new construction, significantly reducing the average project life cycle, and have commissioned stations in as little as eight months' time.

## All the expertise you need under a single roof

As your full-service EPC partner, we can fulfill your project requirements without the need for outside resources or subcontractors. Additionally, few companies in the industry can

match the seamless ties we have nurtured with our regional gas and electric utility partners. These relationships enable us to adhere to and even accelerate our project timelines.

We'll manage your project from beginning to end and provide a crystal clear picture of everything that's going on at all times. Rely on us to handle your complete project needs or choose from an a-la-carte offering of any of the services we provide:

**Business case assessment:** A CNG fuel station is a significant capital and operating investment that requires detailed, sophisticated preliminary analysis. Building your own station is not always the best choice. Count on us to go the extra mile to help you set expectations before breaking ground.

**Site location and feasibility:** Before you commit to any investment, we determine the

### **Identification of funding opportunities:**

We work with you and our industry partners to identify the best possible sources of grants, rebates, and funding to offset your investment cost and deliver faster payback and value.

### **Conceptual site layout for new and retrofit projects:**

There is no one-size-fits-all approach to designing a CNG fueling station. We partner with you to engineer a facility customized to meet your exact needs, optimizing for space utilization, fueling positions, traffic flow (utilizing auto-turn software simulations), equipment specifications, and three-dimensional renderings to provide a vivid picture of your site's potential and any obstacles that may surface.

### **Collaboration with local utilities and municipalities:**

From day one, we work closely with our utility and building authority partners to determine the load requirements for your project. We handle the required permitting, documentation, and submissions steps, along with reviewing tariff schedules and rates for pricing and forecasting anticipated hours of operation.

### **System installation, debugging, and commissioning:**

Our turnkey project solutions include installation and testing of all equipment to verify full interoperability and optimal performance. Our crew leaves no detail to chance, examining the facility's compressors, storage tanks, dryers and filtration equipment, piping, dispensers, card readers and point-of-sales systems.

**System maintenance:** Our rapid-response technicians are just a phone call away. They're available 24/7 to support the safe and clean operation of our over 400 client stations. We perform comprehensive maintenance with an uncompromising commitment to safety, compliance, and quality. Your drivers will find only clean, properly-maintained equipment

## Over 55 Years of Insight, Innovation, and Service

Wayne Perry, Inc. is raising the bar for environmental compliance. Whether building or maintaining a state-of-the-art fueling facility, designing an alternative fuel project, or conducting site remediation, we make it simple.
